Habasit – Solutions in motion

## New UV-C-Resistant TPU Food Belts

Habasit is setting new benchmarks by adding the feature of UV-C resistance to already well proven TPU food belts.

Belts with this new UV-C-resistant feature are particularly suitable for the use in the meat industry, especially in slicer, skinner and dicer lines.

### **Five times longer belt life**

The new UV-C-resistant attribute counteracts the aging of the belt surfaces caused by disinfecting UV-C radiation. Extensive lab and field tests have proven that Habasit TPU food belts with UV-C-resistant properties achieve a five times longer belt lifetime than untreated belts:

- Cost savings due to longer belt service life and fewer belt replacements with UV-C disinfection device
- Hydrolysis-resistant TPU assures long lifetime in humid environment
- EU and FDA conformable belts guarantee full safety

# Impact of UV-C disinfection on belt surface

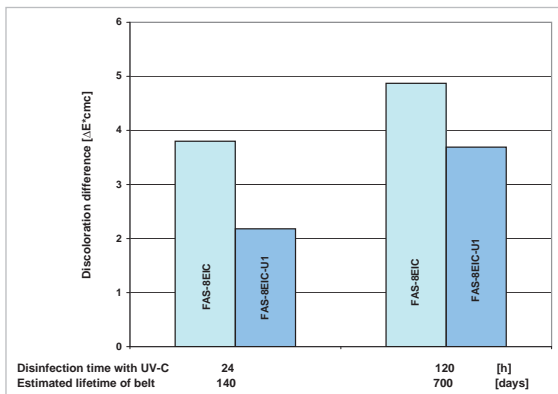

## Alteration of color is an indicator of aging

Belt surface before exposure to UV-C radiation

- Untreated belt surface  
Strong ageing after 140 hours under UV-C radiation
- UV-C-stabilized belt  
Shows same surface change only after 700 hours under UV-C radiation

## Lifetime of belt estimated with following application conditions:

- Two shift operation 16 hours/day and 5 days/week
- Length of the belt 2,000 mm
- Exposure intensity 10 mW/cm<sup>2</sup>
- Temperature < 25 °C
